Complimentary Wireless Internet

We have just completed a thorough upgrade of our wireless network to the new 'n' standard, which provides for 300 Mbps service running on a 1000Mbps backbone network. The speed of this new "n" standard has been compared to prior "b" standard as what a Maserati is to a Pinto.

St. Andrew's is among the first to offer this cutting edge WLAN technology giving our guests trouble free, exceptionally fast, wireless internet connections for up to 1000 users at the same time. Combined with our fiber optic internet access, dedicated for the exclusive use of our clients and backed-up with stand-by DSL service, we are pleased to offer the highest possible level of service and reliability. St. Andrew's provides access to this robust public wireless network to participants on a complimentary basis.

In the event that your participant's laptop is not Wi-Fi ready, we have wireless network cards to rent at \$20 per day taxes included.
